

Event Code List
Nationally Notifiable Diseases and Other Conditions of Public Health Importance
Division of Public Health Surveillance and Informatics, Centers for Disease Control and Prevention
January 2005

Code	Event	Notes +	Print Criteria †
10245	African Tick Bite Fever		
10560	AIDS*	No longer collected through NETSS. Data supplied to NNDSS by CDC HIV/AIDS program on monthly basis.	Print criteria are determined by the CDC AIDS/HIV program.
11040	Amebiasis	Deleted from NNDL in 1995.	
10350	Anthrax*		All reports are printed. CDC will verify incoming cases by consulting a State Epidemiologist. Provisional cases will be withheld from publication pending confirmation by NCID.
10010	Aseptic meningitis	Deleted from NNDL in 1995.	
32020	Asthma, Work-related		
12010	Babesiosis		
10650	Bacterial meningitis, other	Extended record format available for NETSS transmission.	
10530	Botulism, foodborne*		All reports are printed.
10540	Botulism, infant*		All reports are printed.
10550	Botulism, other (includes wound)*	Codes 10548 and 10549 can be used to track "other unspecified" and "wound" botulism separately. Event code 10550 should only be used by states who cannot report separately using codes 10548 and 10549.	All reports are printed.
10548	Botulism, other unspecified*	Use code 10548 if you can differentiate "other unspecified" botulism from "wound" botulism; otherwise, use code 10550.	All reports are printed.
10549	Botulism, wound*	Use code 10549 if you can differentiate "wound" botulism from "other unspecified" botulism; otherwise, use code 10550.	All reports are printed.
10020	Brucellosis*		All reports are printed.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
11020	Campylobacteriosis		
10273	Chancroid*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10274	<i>Chlamydia trachomatis</i> genital infection*	Added to NNDL in 1995. Extended record format available for STD*MIS data transmitted through NETSS.	All reports are printed.
10470	Cholera (toxigenic <i>Vibrio cholerae</i> 01 or 0139)*		All reports are printed. Before printing, the existence of "toxigenic O1 or O139" serospecies and other information in the report of a provisional case is verified with the State Epidemiologist; cases will be withheld from <i>MMWR</i> publication pending confirmation by NCID.
11900	Coccidioidomycosis*	Added to NNDL in 1995.	All reports are printed.
11580	Cryptosporidiosis*	Added to NNDL in 1995.	All reports are printed.
11575	Cyclosporiasis*	Added to NNDL in 1999.	All reports are printed.
10680	Dengue	Formerly 'dengue fever'. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	
10685	Dengue hemorrhagic fever	As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	
10040	Diphtheria*	There is no disease-specific extended record transmitted through NETSS for this condition.	CSTE VPD print criteria are used. Cases with confirmed, probable, and unknown case status are printed. Before printing, CDC staff will verify cases via consultation with a State Epidemiologist; cases will be released to print in the <i>MMWR</i> upon such verification.
11085	Ehrlichiosis, human granulocytic* (HGE)	Added to NNDL in 1998.	All reports are printed.
11086	Ehrlichiosis, human monocytic* (HME)	Added to NNDL in 1998.	All reports are printed.
11087	Ehrlichiosis human, other or unspecified agent*	Added to NNDL in 2001.	All reports are printed.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
10070	Encephalitis, post-chickenpox	Deleted from NNDL in 1995.	
10080	Encephalitis, post-mumps	Deleted from NNDL in 1995.	
10090	Encephalitis, post-other	Deleted from NNDL in 1995.	
10050	Encephalitis, primary	Deleted from NNDL in 1995. Replaced by event codes 10051-10058.	
10058	Cache Valley virus neuroinvasive disease	Formerly 'encephalitis/meningitis Cache Valley'. Split into neuroinvasive and non-neuroinvasive categories in 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	
10066	Cache Valley virus non-neuroinvasive disease	Category created by 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	
10054	California serogroup virus neuroinvasive disease*	Added to NNDL in 1995 (see Encephalitis, primary, 10050). Formerly 'encephalitis/meningitis California serogroup viral'. Split into neuroinvasive and non-neuroinvasive categories in 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10061	California serogroup virus non-neuroinvasive disease*	Category created by 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS. Added to NNDL in 2005.	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10053	Eastern equine encephalitis virus neuroinvasive disease	Added to NNDL in 1995 (see Encephalitis, primary, 10050). Formerly 'encephalitis/meningitis, eastern equine'. Split into neuroinvasive and non-neuroinvasive categories in 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
10062	Eastern equine encephalitis virus non-neuroinvasive disease*	Category created by 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS. Added to NNDL in 2005.	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10057	Powassan virus neuroinvasive disease*	Added to NNDL in 2002. Formerly 'encephalitis/meningitis, Powassan'. Split into neuroinvasive and non-neuroinvasive categories in 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10063	Powassan virus non-neuroinvasive disease*	Category created by 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS. Added to NNDL in 2005	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10051	St. Louis encephalitis virus neuroinvasive disease*	Added to NNDL in 1995 (see Encephalitis, primary, 10050). Formerly 'encephalitis/meningitis, St. Louis'. Split into neuroinvasive and non-neuroinvasive categories in 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10064	St. Louis encephalitis virus non-neuroinvasive disease*	Category created by 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS. Added to NNDL in 2005	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10055	Venezuelan equine encephalitis virus neuroinvasive disease	As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
10067	Venezuelan equine encephalitis virus non-neuroinvasive disease	As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	
10056	West Nile virus neuroinvasive disease*	Added to NNDL in 2002. Formerly 'encephalitis/meningitis, West Nile'. Split into neuroinvasive and non-neuroinvasive categories in 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS. For West Nile fever, use code 10049.	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10049	West Nile virus non-neuroinvasive disease*	Formerly 'West Nile Fever'. Category created by 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS. Added to NNDL in 2005	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10052	Western equine encephalitis virus neuroinvasive disease*	Added to NNDL in 1995 (see Encephalitis, primary, 10050). Formerly 'encephalitis/meningitis, western equine'. Split into neuroinvasive and non-neuroinvasive categories in 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10065	Western equine encephalitis virus non-neuroinvasive disease*	Category created by 2004 CSTE position statement. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS. Added to NNDL in 2005	Cases with confirmed and probable case status are printed, as per the request of NCID. Only cases reported with a disease onset date are published. Data are aggregated and published according to the week and year of disease onset.
10059	Japanese encephalitis virus neuroinvasive disease	Formerly 'Japanese encephalitis'. As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
10068	Japanese encephalitis virus non-neuroinvasive disease	As of July 1, 2004, these data are reported to CDC through ArboNET and should not be reported through NETSS.	
11562	Enterohemorrhagic <i>Escherichia coli</i> (EHEC) shiga toxin+ (serogroup non-0157)*	Added to NNDL in 2001.	All reports are printed.
11560	Enterohemorrhagic <i>Escherichia coli</i> (EHEC) O157:H7*	Added to NNDL in 1994.	All reports are printed.
11564	Enterohemorrhagic <i>Escherichia coli</i> (EHEC) shiga toxin+ (not serogrouped)*	Added to NNDL in 2001.	All reports are printed.
10570	Flu activity code (Influenza)	Data collected for CDC program.	
11570	Giardiasis*	Added to NNDL in 2002.	All reports are printed.
10280	Gonorrhea*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10276	Granuloma inguinale (GI)	Deleted from NNDL in 1995. Extended record format available for STD*MIS line-listed data transmitted through NETSS.	
10590	<i>Haemophilus influenzae</i>, invasive disease*	Extended record format available for NETSS transmission	CSTE VPD print criteria are used. Cases with confirmed, probable, and unknown case status are printed.
10380	Hansen disease (Leprosy)*		All reports are printed.
11610	Hantavirus infection	If infection results in illness meeting the hantavirus pulmonary syndrome case definition, use event code 11590 and do not report using code 11610. However, if patient has evidence of infection without meeting the hantavirus pulmonary syndrome case definition, report using 11610.	
11590	Hantavirus pulmonary syndrome*	Added to NNDL in 1995.	All reports are printed. Before printing, CDC staff will verify cases via consultation with a State Epidemiologist; cases will be released to print in the MMWR upon such verification.
42020	Head injury		

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
11550	Hemolytic uremic syndrome postdiarrheal*	Added to NNDL in 1995.	All reports are printed.
10110	Hepatitis A, acute*	Extended record format available for NETSS transmission.	All reports are printed.
10105	Hepatitis B virus infection, chronic*	Added to NNDL in 2003. Per CDC Hepatitis Program, calendar year 2003 and 2004 data will not be re-released or published due to data quality concerns (e.g. duplicate reporting).	Only confirmed cases are printed, as per the CDC Hepatitis Program.
10100	Hepatitis B, acute*	Extended record format available for NETSS transmission.	All reports are printed.
10104	Hepatitis B, virus infection perinatal*	Event code 10100 was previously used for this condition.	All reports are printed.
10106	Hepatitis C virus infection, past or present*	Added to NNDL in 2003. Per CDC Hepatitis Program, calendar year 2003 and 2004 data will not be re-released or published due to data quality concerns (e.g. duplicate reporting).	Only confirmed cases are printed, as per the CDC Hepatitis Branch
10101	Hepatitis C, acute*	Extended record format available for NETSS transmission.	All reports are printed. Data merged with event code 10480 when printed in MMWR tables under heading "Hepatitis, C/NA,NB."
10102	Hepatitis Delta co- or super-infection, acute (Hepatitis D)	Data collected for CDC program. Extended record format available for NETSS transmission.	
10103	Hepatitis E, acute	Data collected for CDC program. Extended record format available for NETSS transmission.	
10480	Hepatitis, non A, non B, acute	Deleted from NNDL in 2003.	
10120	Hepatitis, viral unspecified	Deleted from NNDL in 1995.	
10562	HIV Infection, adult*	Not collected through NETSS. Data are not currently supplied by CDC program.	
10561	HIV Infection, pediatric*	Not collected through NETSS. Data supplied to NNDSS by CDC HIV/AIDS program on a monthly basis.	Print criteria are determined by the CDC HIV/AIDS program.
10568	Human T-Lymphotropic virus type I infection (HTLV-I)		
10569	Human T-Lymphotropic virus type II infection (HTLV-II)		
11070	Influenza, animal isolates		
11060	Influenza, human isolates		

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
11061	Influenza-associated mortality*	Only nationally notifiable in children < 18 years of age. Influenza-associated pediatric mortality was added to the NNDL at the beginning of the flu season in October 2004. Data for pediatric influenza deaths are reported to CDC's Influenza Branch via a web-based application. These data should NOT be reported through NETSS. CDC's web-based application limits entry of case reports to the current age group under surveillance. Note that the event code itself is not limited to that age group.	Cases with confirmed case status are printed.
50000	Kawasaki Disease		
32010	Lead poisoning		
10490	Legionellosis*		All reports are printed.
10390	Leptospirosis	Deleted from NNDL in 1995.	
10640	Listeriosis*	Added to NNDL in 2000. Extended record format available for NETSS transmission.	All reports are printed.
11080	Lyme disease*	Extended record format available for NETSS transmission.	All reports are printed.
10306	Lymphogranuloma venereum (LGV)	Deleted from NNDL in 1995. Extended record format available for STD*MIS line-listed data transmitted through NETSS.	
10130	Malaria*		All reports are printed.
10140	Measles (rubeola), total*	Extended record format available for NETSS transmission.	CSTE VPD print criteria are used. Cases with confirmed and unknown case status are printed.
10150	Meningococcal disease* (<i>Neisseria meningitidis</i>)	Extended record format available for NETSS transmission.	All reports are printed.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
11661	Methicillin- or oxacillin- resistant <i>Staphylococcus aureus</i> coagulase-positive (MRSA a.k.a. ORSA)	NCID is working to develop the capacity to support voluntary reporting of MRSA data through the NEDSS Base System. This will help to facilitate the collection and reporting of non-notifiable MRSA data to the NNDSS, by interested states. In addition, NCID currently collaborates with 8 Emerging Infections Program sites in the ABCs Surveillance System to monitor invasive MRSA. States interested in using the ABCs protocol and methods are welcomed to contact Dr. Monina Klevens (MKlevens@cdc.gov, or by phone at 404-498-1213). Findings gathered from both surveillance systems (ABCs and NNDSS) will be used to inform CSTE's decision whether MRSA (ORSA) should be added to the list of nationally notifiable diseases.	
11801	Monkeypox		
42040	Motor vehicle injury	Data for this event are not currently transmitted through NETSS.	
10308	Mucopurulent cervicitis (MPC)	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	
10180	Mumps*	Extended record format available for NETSS transmission.	CSTE VPD print criteria are used. Cases with confirmed, probable, and unknown case status are printed.
10317	Neurosyphilis*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10307	Nongonococcal urethritis (NGU)	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	
42060	Other injury		
10309	Pelvic Inflammatory Disease (PID), Unknown Etiology	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	
10190	Pertussis*	Extended record format available for NETSS transmission.	CSTE VPD print criteria are used. Cases with confirmed, probable, and unknown case status are printed.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
10440	Plague*		All reports are printed. Before printing, CDC will verify provisional case reports via consultation with a State Epidemiologist; cases will be withheld from <i>MMWR</i> publication pending confirmation by NCID.
10410	Poliomyelitis, paralytic*	There is no disease-specific extended record transmitted through NETSS for this condition.	CSTE VPD print criteria are used. Before printing, NIP will verify case reports based on an expert panel review. Any case of polio will be withheld from publication pending receipt of NIP expert panel review verification.
10450	Psittacosis* (Ornithosis)		All reports are printed.
10255	Q fever*	Added to NNDL in 1999.	All reports are printed.
10340	Rabies, animal*	Animal species reportable in NETSS transmission.	All reports are printed.
10460	Rabies, human*		All reports are printed. Before printing, CDC staff will verify cases via consultation with a State Epidemiologist; cases will be released to print in the <i>MMWR</i> upon such verification.
11030	Reye syndrome		
11050	Rheumatic fever	Deleted from NNDL in 1995.	
10250	Rocky Mountain spotted fever*		All reports are printed.
10200	Rubella*	Extended record format available for NETSS transmission	CSTE VPD print criteria are used. Cases with confirmed and unknown case status are printed.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
10370	Rubella, congenital syndrome*		CSTE VPD print criteria are used. Cases with confirmed, probable, and unknown case status are printed. Before printing, CDC staff will verify cases via consultation with a State Epidemiologist; cases will be released to print in the <i>MMWR</i> upon such verification.
11000	Salmonellosis*		All reports are printed.
10575	Severe Acute Respiratory Syndrome (SARS)-associated Coronavirus disease* (SARS-CoV)	Added to NNDL on July 1, 2003. Data supplied to NNDSS by various reporting mechanisms, including NETSS, the SARS web system, and messaging to the SARS web system.	Cases with confirmed and probable case status are printed. Before printing, CDC will verify provisional case reports via consultation with a State Epidemiologist; cases will be withheld from <i>MMWR</i> publication pending confirmation by NCID. Note: On October 30, 2003, CSTE approved the publication of SARS-CoV data during 2003 and 2004 from all States, regardless of whether the State made SARS-CoV reportable. This reflects a suspension of the general NNDSS rule that data only be published from States where the NNDSS condition is reportable.
11010	Shigellosis*		All reports are printed.
32000	Silicosis	Added to NNDL in 1996.	
11800	Smallpox*	Deleted from the NNDL in 1988, but added back to the NNDL in 2004.	Cases with confirmed and probable case status are printed. Before printing, CDC staff will verify all provisional cases reported via consultation with State Epidemiologist; confirmed and probable cases will be withheld from <i>MMWR</i> publication pending confirmation by NIP.
42010	Spinal cord injury		

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
11710	Streptococcal disease, invasive, Group A*	Added to NNDL in 1995.	All reports are printed.
11715	Streptococcal disease, invasive, Group B		
11716	Streptococcal disease, other, invasive, beta-hemolytic (non-group A and non-group B)	Added for use in the National Electronic Disease Surveillance System Bacterial Meningitis and Invasive Respiratory Disease Program Area Module.	
11700	Streptococcal toxic-shock syndrome*	Added to NNDL in 1995.	All reports are printed.
11720	<i>Streptococcus pneumoniae</i> invasive, drug-resistant*	Added to NNDL in 1995.	All reports are printed.
11717	<i>Streptococcus pneumoniae</i>, invasive disease*	Added to NNDL in 2001. Only nationally notifiable in children < 5 years.	All reports are printed of cases in children < 5 years old.
50010	Sudden Infant Death Syndrome		
42050	Suicide		
10316	Syphilis, congenital*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10313	Syphilis, early latent*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10314	Syphilis, late latent*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10318	Syphilis, late with clinical manifestations other than neurosyphilis*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10311	Syphilis, primary*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10312	Syphilis, secondary*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.
10310	Syphilis, total primary and secondary*	Used by states not using STD*MIS or other line-listed STD reporting through NETSS, but instead used for transmitting summary data through NETSS.	All reports are printed.
10315	Syphilis, unknown latent*	Extended record format available for STD*MIS line-listed data transmitted through NETSS.	All reports are printed.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
10210	Tetanus*	Extended record format available for NETSS transmission	CSTE VPD criteria are used. Cases with confirmed and unknown case status are printed.
10520	Toxic-shock syndrome (staphylococcal)*		All reports are printed.
12020	Toxoplasmosis		
10270	Trichinellosis*	Preferred name changed from trichinosis at NCID program request, October 2004. Terms are synonymous but trichinellosis will be encouraged as the preferred term.	All reports are printed.
10220	Tuberculosis*	Extended record format for system tracking is available from TIMS for NETSS transmission.	Print criteria are determined by the CDC Tuberculosis program.
10230	Tularemia*	Deleted from NNDL in 1995; Added to NNDL in 1999.	All reports are printed.
10240	Typhoid fever* (caused by <i>Salmonella typhi</i>)		All reports are printed.
10260	Typhus Fever, (endemic fleaborne, Murine)	Deleted from NNDL in 1988.	
11663	Vancomycin-intermediate <i>Staphylococcus aureus*</i> (VISA)	Added to NNDL in 2004.	Only confirmed cases are printed. Before printing, CDC will verify provisional case reports via consultation with a State Epidemiologist; cases will be withheld from <i>MMWR</i> publication pending confirmation with NCID.
11645	Vancomycin-resistant <i>Enterococcus</i>		
11665	Vancomycin-resistant <i>Staphylococcus aureus*</i> (VRSA)	Added to NNDL in 2004.	Only confirmed cases are printed. Before printing, CDC will verify provisional case reports via consultation with a State Epidemiologist; cases will be withheld from <i>MMWR</i> publication pending confirmation with NCID.
10030	Varicella (Chickenpox)*	Added to NNDL in 2003.	VPD print criteria are used. Cases with confirmed, probable, and unknown case status are printed.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Code	Event	Notes +	Print Criteria †
11541	<i>Vibrio parahaemolyticus</i>		
11540	<i>Vibrio spp.</i> , non-toxigenic, other or unspecified		
11542	<i>Vibrio vulnificus</i>		
10660	Yellow fever*		All reports are printed. Before printing, CDC will verify provisional case reports via consultation with a State Epidemiologist; cases will be withheld from <i>MMWR</i> publication pending confirmation by NCID.
11565	Yersiniosis		

†**Print policy for the National Notifiable Diseases Surveillance System:** For a case report of a nationally notifiable disease to print in the *Morbidity and Mortality Weekly Report (MMWR)*, the reporting state or territory must have designated the disease reportable in their state or territory for the year corresponding to the data year of report to CDC. After this criterion is met, the disease-specific criteria listed in the table above are applied. When the above-listed table indicates that “all reports” will be earmarked for printing, this means that cases designated with “unknown” or “suspect” case confirmation status will print just as “probable” and “confirmed” cases will print. Print criteria for Vaccine Preventable Diseases (VPD) reflect the case confirmation status print criteria described by the Council of State and Territorial Epidemiologists (CSTE) 1999 Position Statement #ID-08 entitled “Vaccine Preventable Diseases Surveillance Data,” and the verification and reporting procedures outlined in the 2003 CSTE Position Statement #03-ID-11 entitled “Guidelines for Verification and Reporting of a Designated Low Incidence and Internationally Quarantinable Diseases to the National Notifiable Diseases Surveillance System (NNDSS)” and the interim position statement to #03-ID-11 that the CSTE Executive Committee approved in October 2004 for SARS-CoV, smallpox, and VISA/VRSA.

+Since CSTE position statements are not generally finalized until July of each year, the NNDSS data for the newly added conditions are not available from all reporting jurisdictions until January of the year following the approval of the CSTE position statement. As such, the “Notes” section includes the first full calendar year that a condition was added (or deleted) from the list of nationally notifiable diseases.

States can voluntarily report data on any diseases/conditions on this list to CDC through NETSS or NEDSS.

*Diseases in bold have been designated by CSTE as nationally notifiable and should be reported to CDC on a regular basis.

Abbreviations and other notes:

CDC	Centers for Disease Control and Prevention
CSTE	Council of State and Territorial Epidemiologists
DHQP	Division of Healthcare Quality Promotion
<i>MMWR</i>	<i>Morbidity and Mortality Weekly Report</i>
NCID	National Center for Infectious Diseases
NEDSS	National Electronic Disease Surveillance System
NETSS	National Electronic Telecommunications System for Surveillance
NIP	National Immunization Program
NNDL	National Notifiable Disease List (infectious diseases reportable to CDC)
NNDSS	National Notifiable Diseases Surveillance System
SSB	Surveillance Systems Branch
STD*MIS	Sexually Transmitted Diseases Management Information System—software for STD surveillance and case management
TIMS	Tuberculosis Information Management System—software for TB surveillance and case management
VPD	Vaccine Preventable Diseases

For purposes of this document, “line-listed” data are meant to mean “case-specific” data.
